Free Books Download Fault Detection Supervision And Safety For Technical Processes 1994 2 Volume Set Free Download MALTAFOODANDWINE.COM Any Format, because we are able to get a lot of information through the reading materials.

[Let us now talk about the motor if we can call it that and the control of the craft it depends on where a flying saucer is and on what kind of energy it uses the most sophisticated and the more recent use g force lines to control the craft g force is a short cut for god force it is really a nickname they come from the center of every planet from the center of every sun from the center of every constellation and galaxy and sector and universe and hence from the creator the most elemental forms come from a planet a step upward would come from the center of the sun and the center of the constellation would be more powerful and the galaxy next on up to the sector and the universe and the most potent of all directly would be the g force lines of the creator](#)

[Man has learned to fly on these lines but because we call them lines in no sense are they perfectly still the whole business from creator to universe lord to sector lord to galactic lord to constellation lord to sun lord to the planetary lord and all the way back up again takes just a split part of a second so theoretically if we are using these lines to travel on we could come from the center of the creation out to here in the most split part of a second](#)

[But no man or son that travels that distance has used that amount of energy or travelled that fast so far in this creation anyway they take their time travelling from the central universe to the outer part of the seventh universe where we are probably in a matter of two or three days in every sense they are slow but they feel much more at ease travelling at that speed even at their amount of development they handle the craft very well but good times are coming should we say](#)

[Question how do these things run anyway what kind of motor do they use you said something about working on the g force lines](#)

[Answer yes if you know how a sailboat operates how a sailboat moves into the wind across the wind against the wind then it will be easy for you to understand how flying saucers work they use the g force lines then they have a means of transportation or a device that so utilizes these g force lines as a means of locomotion now they are moving from the creation center outward there are two kinds of lines those that come down the phalanx from the central universe clear out to the outer seventh universe and the kind that come from the center of the planets the sun the constellation and galaxy and so forth now the only difference between these things](#)
